

Project Overview

Mission and Scope

Problem

Nowadays, there are so many specific subjects, along with a lot of terminologies. It is difficult for teachers and students to find correct information despite searching on Internet. For that reason, teachers want to create their own encyclopedia for some subjects to re-use year-by-year. That's why our project has been developed.

Main Goal

Provide an education-oriented encyclopedia which allow user to create and organize multimedia articles about common subjects in education.

Scope

Focus on the web application and some features that help create and guarantee accuracy of the contents.

- Work with common servers and browsers.
- Easy customizations of document style.
- Support multimedia contents like image, video, flash...

Development methodology

Agile method: Extreme programming

Status

Completed some of the most important features:

- User Management
- Create, Edit, Delete articles
- Embed Flash, Image, Video
- Upload file
- User-friendly interface
